

This assignment was detailed to create a GUI. The library used in this project was JavaFX. This project was the most strenuous and time-consuming project assigned yet. It was worth the time it took. I used ChatGPT and Co-Pilot to complete this assignment. Co-Pilot was beneficial for the majority of the assignment. Moreover, it assisted in debugging the Maven issues in the code. When using Maven previously, I had used it through IntelliJ, so the learning process for this project was high. Learning to use Maven in VS Code will be beneficial in the future. AI helped me complete the following tasks:

- constructing the placement of the code blocks
- generating the Java doc
- moving methods to the correct files
- debugging code when necessary.
